Subject: Building Update - December 5, 2008

DGS and their consultants have finished their elevator shaft inspection work on the 11th floor, and that floor became available for use as a cross over from the low rise elevators to the high rise elevators December 3, 2008. Following the completion of the investigation work on the 11th floor by consultant LaCroix Davis, DGS hygienist consultant BioMax conducted and provided to BOE a Post Inspection Clearance Assessment Report for that floor, which is posted [here](#). BioMax also conducted tests of air samples and provided clearance to BOE for use of the 11th floor. Our consultant, Hygiene Technologies, continues to monitor the work of DGS and their consultants. Your cooperation during this process is very much appreciated.

DGS has told us that LaCroix Davis should complete its investigation of the elevator shafts and have a report to us this month. As soon as we receive that report, it will be posted to the Building Assessment webpage.
