Subject: 7th Floor clearances

Hello all,

Hygienetech has received the data for the clearances performed on the 7th Floor in the northwestern corner western punchout window, the southeastern corner eastern punchout window, the eastern drinking fountain and storage Room 7A and the results meet our clearance criteria. However the data from the southeastern corner southern punchout window containment indicated low levels of Stachybotrys in both the air and surface samples. Therefore, the southeastern corner southern punchout data did not meet our clearance criteria and additional cleaning is recommended. Please let me know if you have any questions.

Regards,

Subject: Re: 7th Floor clearances

Wes,

LCD has also received similar testing results for the identified containments. JLS will reclean the SE Punch Out Window #1 (south facing) followed by another testing event tomorrow.

The testing results for the other containments - northwestern corner western punchout window #2, the southeastern corner eastern punchout window #2, the eastern drinking fountain and storage Room 7A meet our clearance criteria and JLS may remove the barriers and proceed with reconstruction.
