JUDY CHU RELEASES 3RD QUARTER 2006 TAXABLE SALES

Los Angeles among Top Performers

Board of Equalization (BOE) Vice Chair Judy Chu today released figures indicating a modest increase in taxable sales during the 3rd quarter of 2006.

Taxable sales totaled \$142.4 billion in the third quarter, up \$3.2 billion (or 2.3 percent) from the third quarter of 2005.

Third quarter taxable sales increased 2.6 percent in Los Angeles County, somewhat faster than the statewide average of 2.3 percent. The City of Los Angeles, in terms of total third quarter taxable sales in the top ten performing cities, ranked 1st in total taxable sales and second in rate of growth – a 3.9 percent increase.

Taxable sales rose far slower than the 6.0 percent growth in personal income in the third quarter, reversing a general trend for most of 2004 and 2005. (See chart.) One contributor to the slower growth in taxable sales may have been the state's slower growth in median home prices, which reduced the purchasing power of many homeowners.

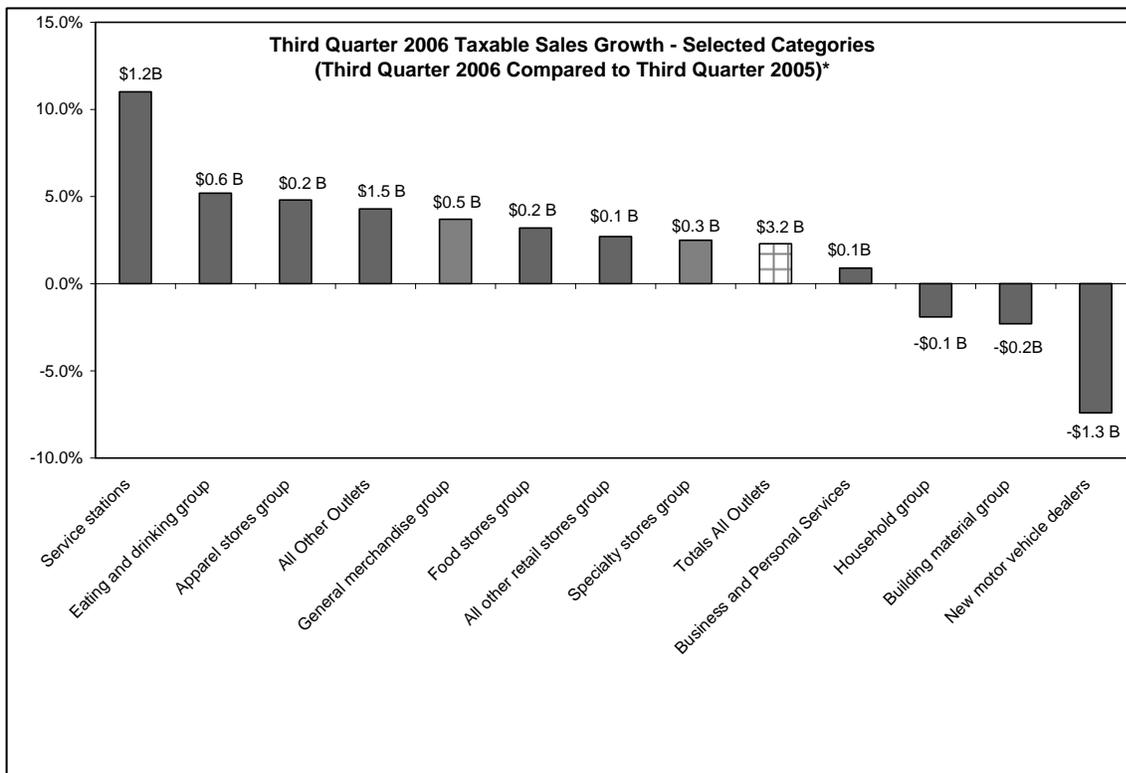

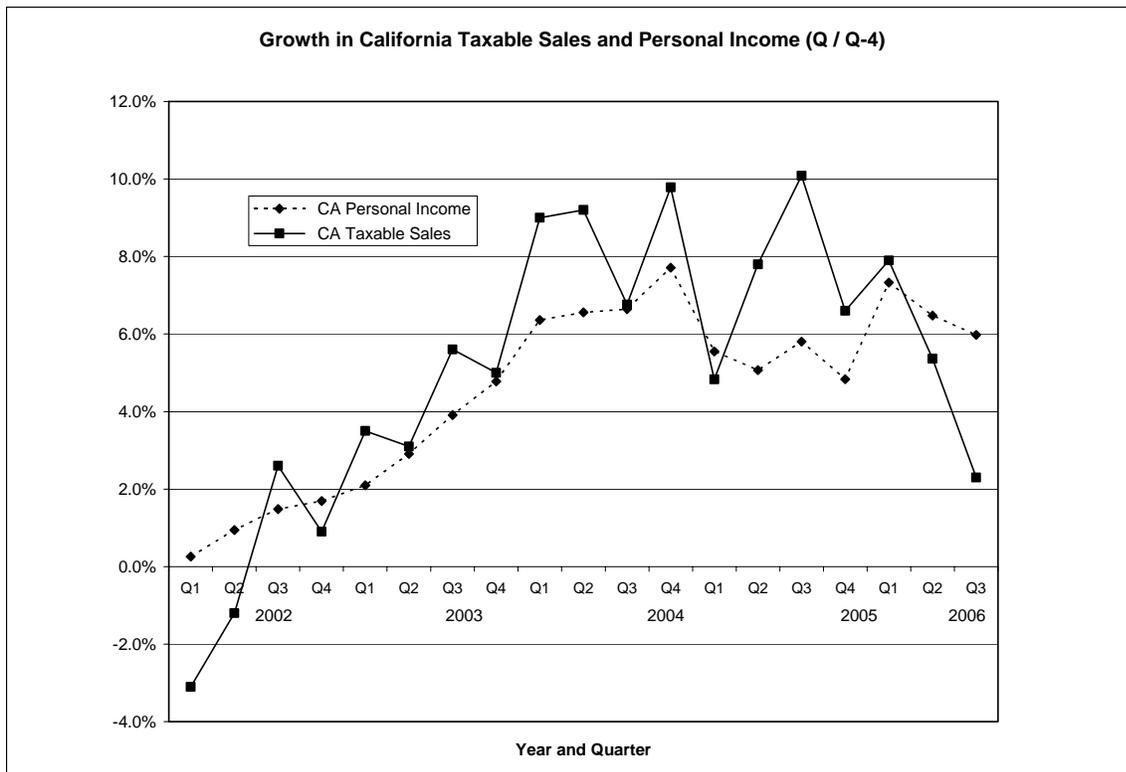

Retail stores posted taxable sales of \$99.1 billion statewide, a 1.6 percent increase over the same period a year ago. Retailers of nondurable goods rose 5.9 percent, while durable goods declined 2.4 percent. A 13.4 percent jump in gasoline prices bolstered total gasoline sales, which are a major component of nondurable goods sales. (See chart.) A 7.4 percent decline in new auto sales, the largest retail sector, held down growth in durable goods. Declines in sales by household furnishings and building materials dealers also reduced durable goods receipts.

Service station dollar value of sales jumped 11.0 percent, faster than any other category. Taxable sales made by service stations yielded \$12.1 billion. All of the gain was accounted for by increased gasoline prices. The average price of gasoline during the third quarter was \$2.907 per gallon, a 13.4 percent jump from the previous year. With the higher prices, California gasoline consumption decreased 1.1 percent compared to the third quarter of 2005.

Third quarter taxable sales by new car dealers were \$16.0 billion, down 7.4 percent from last year. This follows a national pattern. New vehicle registrations in California also fell in the third quarter, decreasing 7.7 percent.

In constant dollar terms, taxable sales increased by 0.2 percent over the same quarter a year ago. The California Taxable Sales Deflator measured an inflation rate of 2.0 percent for the third quarter of 2006. Price increases for gasoline and building materials were responsible for a large part of the inflation rate. The California CPI rose 4.0 percent (The CPI includes services, whose prices tend to increase faster than those of most taxable goods).

The five-member Board of Equalization is a publicly elected tax board. The Board collects nearly \$53 billion annually in taxes and fees supporting state and local government services. It hears business tax appeals, acts as the appellate body for franchise and personal income tax appeals, and plays a significant role in the assessment and administration of property taxes.

This chart highlights specific categories, but is not all inclusive. Please see links above for other figures.
