Subject: Building Update

We continue to make protecting the health and safety of our employees our number one priority.

The Board of Equalization has retained consultants including a building engineer, industrial hygienists, medical practitioners and others to help in the assessment, evaluation and investigation of the headquarters building at 450 N Street.

Meanwhile, air quality sampling by Department of General Services continues on the occupied floors of the building.

I know there are many inconveniences associated with employees being displaced. I appreciate the continued cooperation of all involved and am especially grateful to our sister agency, FTB, for housing many of our legal department staff.

I am also very pleased with the hard work of all BOE employees who have helped to relocate staff, set up equipment and assist us through this process.
